New York, NY | 929-287-8271 | kayla.prutti@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | U.S. Citizenship

SKILLS

React, Vue.js, JavaScript, TypeScript, Python, Node.js, Express, Next.js, Vite, webpack, HTML, CSS, Tailwind CSS, Responsive Design, SQL, PostgreSQL, Lit, Web Components, Component Libraries, AG Grid, D3.js, Highcharts, Data Visualization, Storybook, Playwright, FastAPI, REST APIs, Pydantic, CRUD, API Design, WebSockets, JWT, Git, Version Control, Docker, Postman, CI/CD, Feature Flags, Figma, Jira, WCAG Accessibility, LLMs, Claude Code, Codex, GitHub Copilot, Cursor, AI-Assisted Development, Cross-Functional Collaboration, Agile Development

EXPERIENCE

Software Engineer, Annalect (Omnicom Group), New York, NY

May 2022 - June 2026

- Built and maintained a data-heavy media planning platform from 0-1, supporting \$5B+ in media investment across 1,500 clients and 3,000+ brands in 110 countries.
- Drove technical direction and end-to-end delivery for features I own, partnering with cross-functional teams in product, design, QA, engineering, and data science from idea through release.
- Made scope and architecture trade-offs to prioritize high-value work, defer unnecessary complexity, and deliver thoughtful solutions in a fast-paced environment without over-engineering.
- Architected frontend code in React and TypeScript to scale with the product, defining component boundaries and state management patterns with performance, interaction quality, and accessibility as core standards.
- Built and maintained a shared component library aligned with the design system, creating reusable, WCAG-accessible patterns with React, Lit, Web Components, and Storybook across product workflows.
- Improved performance of data-heavy workflows through pagination and caching of previously loaded data, reducing repeated requests and keeping interactions responsive across large datasets.
- Built complex data interfaces with AG Grid, D3.js, and Highcharts, supporting editing, filtering, and sorting of large datasets while keeping tables, interactive visualizations, and application state synchronized.
- Trusted to review code and verify that features worked according to requirements, identify bugs and edge cases, and uphold code quality and maintainability before release.
- Designed and built backend REST APIs with Python and FastAPI, working with SQL data and owning request/response models, Pydantic validation, error handling, pagination, CRUD operations, and business logic.
- Worked with WebSockets to keep application views synchronized with changing data and JWT for token authentication and permission-based access. Validated API behavior with Postman.
- Supported incremental releases with feature flags and familiarity with CI/CD pipelines.
- Used Claude Code and Codex throughout development to navigate unfamiliar code, generate repetitive code, investigate bugs, and review changes for missed requirements and edge cases.
- Reviewed and tested AI-generated changes against requirements, owning code quality and release readiness.

Web Developer, NYC Tech Pros, New York, NY

Oct 2020 - Oct 2021

- Built and maintained web features for an IT services startup, working closely with the CEO and marketing team to translate business priorities into website improvements.
- Developed responsive pages and service-request flows, integrated REST APIs, and resolved issues to improve customer-facing functionality.

PROJECTS

i-Prep | TypeScript, React, Node.js, Express

[Live demo](#)

- Created i-Prep to reduce time spent preparing for interviews, allowing users to create accounts, maintain personal interview records, and save questions asked in past interviews.
- Built preparation workflows for each interview, letting users select previously asked questions or add custom questions to organize focused practice.

EDUCATION

Certificate in Software Engineering - Flatiron School	2022
Associate in Computer Programming - ASA College	2020
B.A. in Japanese Studies - Naresuan University	2015
